### Office Action Summary

**Application No.**

10/623,352

**Applicant(s)**

YADAV-RANJAN, RANI

**Examiner**

FONYA LONG

**Art Unit**

3689

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 18 August 2010.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/CD)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

### **DETAILED ACTION**

This communication is a Final Office Action rejection on the merits in response to communications received on August 18, 2010. Claims 1-23 are currently pending and have been addressed below.

#### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

**As per Claims 1, 2, 11, and 12**, Claims 1 and 11 recite the formula for generating a contractor risk assessment score to be calculated by combining the weighted average of scores of the historical contractor variables. However, claims 2 and 12 discloses the CRAS score being calculated by dividing the assigned score on historical contractor variable by the maximum score on historical contractor variable and multiplying by 100. The two formulas contradict themselves. It is unclear what formula is actually being claimed. Claims 1 and 11 describes a formula wherein the weighted average (which is defined as an average in which each quantity to be averaged is assigned a weight. These weightings determine the relative importance of each quantity on the average. Weightings are the equivalent of having that many like items with the same value involved in the average; by Dictionary.com, "weighted average," in

Investopedia.com. Source location: Investopedia Inc.

[http://dictionary.reference.com/browse/weighted average](http://dictionary.reference.com/browse/weighted+average). Available:

<http://dictionary.reference.com>. Accessed: February 10, 2010.) of all the historical contractor variables are combined. Claims 2 and 12 recite the cumulative sum of assigned score on historical contract variable being divided by the cumulative sum of the maximum score on historical contract variable which is then multiplied by 100.

**As per Claims 3-10 and 13-23**, the claims are dependent from claims 1, 2, 11, and 12, and therefore contain the same deficiencies as stated above.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Flynn (WO 02/23443).

**As per Claims 1 and 11**, Flynn discloses a method and system for providing a contractor risk assessment score (CRAS) (Pages 13-16, discloses raw scores for various risk assessments (character, financial, property, legal, and project)), comprising: a memory for storing data (Page 9, Para. 1, discloses a computer having storage

comprising hard disk drives or other memory storage devices); a computer coupled to said memory (Page 9, Para. 1, discloses a computer having storage comprising hard disk drives or other memory storage devices) and programs in execution by said computer (Page 9, Para. 1, discloses program modules being integrated and interacting with each other via the computer), said program extracts data from one or more external database (Page 9, via the only communication with off-line storage is with the process server which will transmit all data to and from historical data file daily at an undisclosed random time) and collects historical contractor variables from the extracted external database data (Page 12-14, discloses collecting historical contractor information such as past financial data, data concerning past customer's character, credit and mortgage histories, and judgments (i.e. one or more contractor engagement variables and one or more contractor performance variables) in order to perform a risk assessment for a contractor to acquire trade loan) and comprises a formula that generates contractor risk assessment score calculated by combining the weighted average of scores of the historical contractor variables wherein the contractor risk assessment score is predictive of whether a contractor is able to complete a construction job on time and on budget (Page 16, Para. 1, discloses the adjusted raw scores being totaled (i.e. combining scores) and compared to the lender's underwriting standards to determine whether the applicant's risk is acceptable).

Examiner asserts the type of historical variables hold little patentable weight in the method and system claim. Examiner asserts that the method of assigning a score to

historical contractor variables would be performed the same regardless of the type of variable.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-4 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn (WO 02/23443) in view of Connor et al. (7,359,865).

**As per Claims 2 and 12**, Flynn discloses a contractor risk assessment score wherein the scores are combined (Pages 13-16, discloses totaling the raw scores for each risk assessment used for determining whether to provide a trade loan to a contractor).

However, Flynn fails to explicitly disclose (CRAS) equaling  $[\epsilon(A_i) / \epsilon(M_i) * 100]$ .

Connor et al. discloses a method for generating a risk assessment with the concept of (CRAS) equaling  $[\epsilon(A_i) / \epsilon(M_i) * 100]$  (Fig. 4, discloses calculating the actual score for risk factors ( $A_i$ ) (via 44a) and calculating the maximum score for risk factors ( $M_i$ ) (via 44b), wherein the actual score is divided by the maximum score and multiplied by 100 to obtain a percentage risk (CRAS) (via 44c)).

Therefore, from the teaching of Connor et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method and

apparatus for producing reduced risk loans using assessment techniques to include (CRAS) equaling  $[\varepsilon(A_i) / \varepsilon(M_i) * 100]$  as taught by Connor et al. in order to aid in determining whether to provide a loan based on the risk assessment.

**As per Claims 3 and 13**, Flynn discloses the contractor is a construction contractor (Page 8, Para. 1, discloses reducing the risk in loans to contractors for construction projects).

**As per Claims 4 and 14**, Flynn discloses a formula that determines a sum of assigned scores on said historical contractor variables (Page 16, Para. 1, discloses providing a total of all the adjusted risk assessment raw scores).

7. Claims 5, 6, 8, 15, 16, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn (WO 02/23443) in view of Connor et al. (7,359,865), as applied to Claims 4 and 14 above, and in further view of Chandak et al. (US 2003/0105689).

**As per Claims 5 and 15**, the Flynn and Connor et al. combination discloses the claimed invention as applied to Claims 4 and 14, above. However, the combination fails to explicitly disclose the historical contractor variables comprising a payment history value and a credit history value.

Chandak et al. discloses a method and system for determining whether to issue a reward incentive credit card to a customer based on a risk value associated with the customer with the concept of historical variables comprising a payment history value based on payments by the contractor and a credit history value of the contractor ([0027]

discloses determining a customer's financial risk value based on past payment history data and credit history information).

Therefore, from the teaching of Chandak et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Flynn and Connor et al. combination to include historical variables comprising a payment history value and a credit history value as taught by Chandak et al. in order to aid in predicting a contractor's behavior based on past occurrences.

**As per Claims 6 and 16**, the Flynn and Connor et al. combination discloses the claimed invention as applied to Claims 5 and 15, above. However, the combination fails to explicitly disclose variables comprising a value for an amount owed in debt.

Chandak et al. discloses a method and system for determining whether to issue a reward incentive credit card to a customer based on a risk value associated with the customer with the concept of the historical contractor variables further comprise a value for an amount owed in debt by the contractor ([0027] discloses determining a customer's financial risk value based on the customer's debts).

Therefore, from the teaching of Chandak et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Flynn and Connor et al. combination to include variables comprising a value for an amount owed in debt as taught by Chandak et al. in order to aid in determining a contractor's ability to perform according to the loan requirements, if provided a loan.

**As per Claims 8 and 18**, Flynn discloses the historical contractor variables comprising at least one predefined criterion selected from the group consisting of:

length-of-license, Cumulative-total-of-engagements, number-of-Notice-of-completions, Number-of-terminations, Current-engagements, Insurance-held divided by Total-value-of-engagement, Company-structure, number-of-employees, years-in-trade, number-of-liens, Number-of-banks-used, Terminations divided by Years-in-trade, Terminations divided by Total-Engagements, Delays divided by Total-Engagements, Number-of-Tax-Liens, Age-of-Contractor, License-Type, License-Status, Repeat Business-with-Bank, Average-size-of-Engagement, Judgments, and Judgments-satisfied (Page 14, Para. 1, discloses analyzing judgments and liens when conducting a risk assessment).

8. Claims 7 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn (WO 02/23443) in view of Connor et al. (7,359,865) and Chandak et al. (US 2003/0105689), as applied to Claims 5 and 15 above, and in further view of Chen (US 2003/0225651).

The Flynn, Connor et al., and Chandak et al. combination discloses the claimed invention. However, the combination fails to explicitly disclose the historical contractor variables comprising at least a Risk Assessment metric or a length of time since a transmitted alert.

Chen discloses a method for generating fulfillment value at risk scores and assessing the stability of the fulfillment value at risk scores with the concept of the variables comprising at least one predefined criterion selected from the group consisting of: a Risk Assessment metric having changed by at least a predetermined amount and a length of time since a transmitted alert ([0013] discloses data being aggregated over

predetermined periods of time (e.g., daily, weekly, monthly) by item to create location value scores to generate risk scores that provides a measure of risk assessment).

Therefore, from the teaching of Chen, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Flynn, Connor et al., and Chandak et al. combination to include variables comprising at least a Risk Assessment metric or a length of time since a transmitted alert as taught by Chen in order to provide a standardized period of time to collect a contractor's historical data when conducting a risk assessment.

9. Claims 9 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn (WO 02/23443) in view of Lewis (6,513,019).

Flynn discloses the claimed invention as applied to Claims 1 and 11. However, Flynn fails to explicitly disclose a score history report.

Lewis discloses a system that enables financial institutions to rationalize risk in a cost-efficient manner with the concept of a score history report generated on a unique desired variable such as months (Col. 21, Lines 63-67; Col. 22, Lines 1-22, discloses enabling a user to enter historical reports as of a specific data and time or across a historical period (i.e. daily, weekly, monthly, quarterly, annually)).

Therefore, from the teaching of Lewis, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method for producing reduced risk loans using assessment of Flynn to include a score history report as taught by Lewis in order evaluate the financial history of a contractor over a period of time.

10. Claims 10, 20, 21, 22, and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn (WO 02/23443) in view of Zizzamia et al. (US 2004/0054553).

**As per Claims 10 and 20**, Flynn discloses the claimed invention as applied to Claims 1 and 11, above. However, Flynn fails to explicitly disclose a formula that generates a score using multivariate methods to produce a coefficient for an external historical contractor variable.

Zizzamia et al. discloses a system and method to predict future profitability and productivity of licensed professionals with the concept of a formula generating a score using multivariate methods to produce a coefficient for an external historical contractor variable and the coefficient represents the contribution the external variable to the CRAS ([0027] discloses using multivariate methods [0081] which provides a correlation coefficient for each of the predictive external variables).

Therefore, from the teaching of Zizzamia et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method for producing reduced risk loans using assessment of Flynn to include a formula that generates a score using multivariate methods to produce a coefficient for an external variable as taught by Zizzamia et al. in order to aid in predicting future behavior of the contractor.

**As per Claim 21**, Flynn discloses the claimed invention as applied to Claim 11, above. However, Flynn fails to explicitly disclose examining external historical contractor variables for cross-correlation against one another.

Zizzamia et al. discloses a system and method to predict future profitability and productivity of licensed professionals with the concept of examining external variables for cross-correlation against one another to validate the external variables ([0079] discloses predictor variables from the various external data sources are examined for cross-correlations).

Therefore, from the teaching of Zizzamia et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method for producing reduced risk loans using assessment of Flynn to include examining external variables for cross-correlation against one another as taught by Zizzamia et al. in order to eliminate highly repetitive variables.

**As per Claim 22**, Flynn discloses the claimed invention as applied to Claim 21, above. However, Flynn fails to explicitly disclose associating an external historical contractor variable with an individual contractor's records.

Zizzamia et al. discloses a system and method to predict future profitability and productivity of licensed professionals with the concept of associating at least one individual external variable with an individual contractor's records based on a data key associated with at least one external data source ([0046] discloses variables from external data sources are matched to producer data to identify a relationship between the variables and insurance producer productivity).

Therefore, from the teaching of Zizzamia et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method for producing reduced risk loans using assessment of Flynn to include associating an

external variable with an individual contractor's records as taught by Zizzamia et al. in order to aid in developing a method that is predictive a contractor's ability to perform.

**As per Claim 23**, Flynn discloses the claimed invention as applied to Claim 11, above. However, Flynn fails to explicitly disclose dividing the data into a relational data set.

Zizzamia et al. discloses a system and method to predict future profitability and productivity of licensed professionals with the concept of dividing the data into a relational data set for developing the score for refining and validating the data ([0085-0089] discloses developing a testing data set that provides the relationships in the data).

Therefore, from the teaching of Zizzamia et al., it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method for producing reduced risk loans using assessment of Flynn to include dividing the data into a relational data set as taught by Zizzamia et al. in order to monitor and minimize the overstating of the relationships in the data.

### ***Response to Arguments***

11. Applicant's arguments filed August 18, 2010 have been fully considered but they are not persuasive.

With respect to Applicant's arguments regarding the 112 2<sup>nd</sup> rejection set forth in the previous office action. Examiner asserts claims 1 and 11 recite the formula for generating a contractor risk assessment score to be calculating by combining the

weighted average of scores of the historical contractor variables. However, claims 2 and 12 discloses the contractor risk assessment score being calculated by the cumulative sum of assigned score on historical contract variable being divided by the cumulative sum of the maximum score on historical contract variable which is then multiplied by 100. Applicant asserts that the formula disclosed in Claims 2 and 12 is just a more specific recitation of the score. Examiner respectfully disagrees. Examiner asserts that the formulas contradict each other rather than Claims 2 and 12 simply providing a more detailed recitation of the calculation disclosed in Claims 1 and 11. Claims 1 and 11 does not mention the step of multiplying by 100 when performing the calculation of a contractor risk assessment score.

With respect to Applicant's arguments regarding Claims 1 and 11 wherein Applicant argues that Flynn fails to disclose "extracting data from one or more external databases and collects historical contractor variables from the extracted external database data." Examiner respectfully disagrees. Examiner asserts that Flynn discloses extracting data from external databases and collect historical contractor variables from the extracted external database data via Page 9 disclosing the process server 130 which will transmit all data to and from historical data file 180 daily at an undisclosed random time via a off-line storage 140 (i.e. external database)).

Examiner asserts that Applicant incorrectly stated that the "latest office action, the examiner admits that the type of historical variables specifically recited in claim 1 are not found in Flynn". Examiner asserts that the previous office action dated February 18, 2010 does not state that Flynn does not disclose the type of historical variables

specifically recited in claim 1. Examiner asserts that it states: "Examiner asserts the type of historical variables hold little patentable weight in the method and system claim. Examiner asserts that the method of assigning a score to historical contractor variables would be performed the same regardless of the type of variable." Examiner asserts that the rejection for Claims 1 and 11 dated February 18, 2010 disclosed Flynn disclosing data including one or more contractor structure variables, one or more size of contractor variables, one or more contractor stability variables, one or more contractor engagement variables and one or more contract performance variables (Pages 12-14, via collecting historical contractor information such as past financial data, data concerning past customer's character, credit and mortgage histories, and judgments).

As per Claims 2-4 and 12-14, Applicant argues that Connor fails to disclose "wherein the formula is (CRAS) equaling  $[\epsilon(Ai) / \epsilon(Mi) * 100]$ , Examiner respectfully disagrees. Examiner asserts Connor discloses (CRAS) equaling  $[\epsilon(Ai) / \epsilon(Mi) * 100]$  via the sum of actual scores 32 for all risk factors 26 within a particular risk factor category 24 (i.e. Fig. 4; column 2) being divided by the sum of maximum scores 30 for all risk factors 26 within a particular risk factor category 24 (i.e. Fig. 4; column 3) and the multiplied by one hundred to obtain a percentage. Therefore the equation is  $[\epsilon(Ai) / \epsilon(Mi) * 100]$ . (Fig. 4; Col. 15, Lines 14-50).

As per Claims 5-6, 8, 15-16, and 18, In response to applicant's argument that there is no teaching, suggestion, or motivation to combine the references, the examiner recognizes that obviousness may be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some

teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988), *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992), and *KSR International Co. v. Teleflex, Inc.*, 550 U.S. 398, 82 USPQ2d 1385 (2007). In this case, Flynn discloses the concept of conducting a risk assessment in reference to construction loans (via Page 9). Chandak discloses the concept of conducting risk assessments to determine what credit card rewards to provide to a customer. Examiner asserts it would have been obvious to combine the known method and system of Flynn with the known method and system of Chandak wherein both arts deal with conducting risk assessment in order to determine a product to provide to a customer in order to aid in determining a customer's reliability and ability to perform based on past behavior and circumstances.

As per Claims 7, 10, 17, and 20-23, Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

### ***Conclusion***

12. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to FONYA LONG whose telephone number is (571)270-5096. The examiner can normally be reached on Mon-Thurs. 7:30am-6pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janice Mooneyham can be reached on (571) 272-6805. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
